*Groundwater Storage*

# Tanks for Manure Storage

# Tanks for Wastewater Treatment Plant

*Biogas Installation*

*Potable Water Storage*

# Prefab Buildings

# Special Applications

*Snack Bar*

*Swimming Pool*

*Tsunami House*

❖ **Steel roof** - offers additional guarantees for applications that have to meet higher requirements in terms of lifecycle, UV resistance or professional appearance. Available in diameters from 3.64 to 14.57 metres.

❖ **Span (tensioned) roof** - offers a good solution if there are specific tank cover requirements (anti-algae). Available in diameters from 3.64 to 20.94 metres. The tank is reinforced with panels with a larger wall thickness.

❖ **Air-pressed tank roof** - the perfect system to completely seal larger silos. The roof together with the liner form an airtight construction. A small fan (U=230V, P=250 Watts) keeps the system under pressure. Available in diameters from 3.64 to 26.40 meters.

Besides the standard galvanised version, the tank panels can be additionally provided with an extra protective coating - **the duplex pre-coat system.**

### Advantages:

- ❖ Manufactured in steelwork under certificates and European standards
- ❖ On both sides of the panels
- ❖ Layer thickness Plastisol 200  $\mu\text{m}$
- ❖ Excellent results of the European DIN test
- ❖ Long duration (25 - 30 year)
- ❖ Lower installation costs
- ❖ Good looking and professional performance

# Unique Selling Points of Tank Systems

- ❖ High quality and strength
- ❖ Lightweight, strong design
- ❖ Long lifetime (durable)
- ❖ Rapid and simple assembly without special assembly or hoisting tools
- ❖ No special requirements for the foundation
- ❖ Wide variety of applications
- ❖ Suitable for storage of almost any kind of liquid
- ❖ Easy to transport around the globe using trucks or containers
- ❖ Competitive compared to concrete or steel silos or regional options
- ❖ Can be sealed with silo caps and covers
